IN THE ABSTRACT:

Please replace the Abstract of the Disclosure originally filed with the above-identified patent application with the following new Abstract of the Disclosure:

ABSTRACT OF THE DISCLOSURE

A piezoelectric electroacoustic transducer includes a quadrilateral piezoelectric diaphragm, a case for accommodating the piezoelectric diaphragm, and terminals fixed to the case so that inner connecting portions thereof are exposed on the inside of the case. Conductive adhesives are applied between lead electrodes of the piezoelectric diaphragm and inner connecting portions of the terminals. The conductive adhesives are applied to positions near two adjacent corners of the piezoelectric diaphragm.
